BARRICADE[®]

FUEL INJECTION AND CARBURETION HOSE
with GreenShield[®] Technology

COVER: Outstanding ozone and heat resistance

REINFORCEMENT: Textile spiral weave provides best-in-class working psi*

ADHESION LAYER: Serves as a second defense against oil and aggressive fuels

GREENSHIELD[®] BARRIER: Patent-pending thermoplastic material delivers the lowest permeation in the industry

BARRIER TUBE: Fortified to resist high heat and aggressive fuels such as Ethanol

MODERN FUELS REQUIRE MODERN FUEL HOSE.

Installing Barricade protects the system against the aggressive fuel mixtures of today's modern fuels, which can degrade basic rubber hose and result in customer comebacks. Plus with Barricade, you can be assured that you are complying with permeation laws, and providing your customers with the best hose available – all while being environmentally-friendly.

- **BEST-IN-CLASS** working psi of 225 (for fuel injection)
- Lowest permeation rate on the market 1 gr/m²/day
- Exceeds California Air Resources Board (CARB) and EPA requirement
- Multi-fuel compatible: Approved for use with leaded and unleaded Gasoline, Diesel, Biodiesel†, E-85, 100% Methanol, **ETHANOL** and gasohol fuels
- Performs 5x better for permeation than the nearest competitor

■ States that have adopted CARB standards

Don't make a mistake: in CARB-regulated states, it is **ILLEGAL** to "alter the original design of the system." Replacement of OEM hose with general-purpose carburetion hose is considered an alteration.

*Barricade Fuel Injection has a best-in-class working pressure of 225 psi

† Biodiesel fuel must meet the ASTM D6751 specification for biodiesel fuel and be produced, marketed and distributed by BQ9000 accredited facilities.

Choose Barricade as your one solution.

There may be many fuel types, but it's easy to choose the right fuel hose when you choose **BARRICADE**.

Belts & Drive Systems

Lawn & Garden Belts

BladeRunner® Belts

An aftermarket belt designed and applied to specific unique applications providing exact OEM fit, construction and performance of leading lawn and garden equipment manufacturers. Built to withstand the rigorous start and stop operation of outdoor power equipment.

- Meets or exceeds the performance of each specific application.
- Utilizes aramid cord construction in most cases.
- Smooth operation during frequent and severe shock loads.
- Reduces costly downtime and labor associated with replacing a belt.
- Superior performance over fractional horsepower belts on recommended applications.

PoweRated® V-Belts

These green belts are an alternative to conventional light-duty belts, with high performance construction delivering more horsepower, less stretch and providing longer service life. PoweRated® belts are suitable for outdoor power equipment, appliances and industrial applications where Fractional Horsepower [FHP] belts are typically used.

- Bareback construction for smooth clutching on shock loaded, backside-idler driven equipment.
- Aramid tensile cords combine limited stretch with extraordinary strength and durability.
- Meets RMA oil and heat resistant standards.

Note: PoweRated® V-Belts can be substituted for equivalent sizes of Truflex® V-Belts.

Note: PoweRated® belts do not meet RMA requirements for static conductivity.

Truflex® V-Belts

Truflex® belts feature superior length stability for minimal take-up requirements. Suitable for all industrial light duty applications, usually using fractional horsepower [FHP] motors.

- Gates curves provide proper cord support and full contact with the sheave-groove for uniform loading, uniform wear and increased belt life.
- Flex-bonded cords are strongly bonded to the body of the belt resulting in equal load distribution and the absorption of bending stress without cord deterioration.
- The Flex-Weave® cover is a patented construction for longer cover life, providing extended protection to the core of the belt from oil, dirt and heat.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Note: Truflex® belts are offered in cross sections 2L [0], 3L [1], 4L [2], 5L [3].

Belts & Drive Systems

Industrial Belts

Super HC® and Super HC® Molded Notch V-Belts

Recommended for use on special drives where space and weight limitations are critical. These “narrow” cross-sections can transmit up to three times the horsepower of the classical cross-sections [A, B, C and D] in the same amount of drive space. Suitable for all industrial applications, particularly where space, weight and horsepower capacity are critical.

- Gates curves provide proper cord support and full contact with the sheave-groove for uniform loading, uniform wear and increased belt life.
- Flex-bonded cords are strongly bonded to the body of the belt resulting in equal load distribution and the absorption of bending stress without cord deterioration.
- The Flex-Weave® cover is a patented construction for longer cover life, providing extended protection to the core of the belt from oil, dirt, and heat.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Industrial Micro-V® Belts (J, L and M Series)

Exclusive truncated [shortened] profile gives Micro-V® belts increased flexibility, reduced heat buildup and allows performance at higher speeds on smaller diameter sheaves. Well suited for applications such as appliances, outdoor power equipment, roller conveyors, machine tools, medical equipment and exercise equipment.

- Fiber reinforced ribs for excellent wear resistance.
- High modulus, low stretch tensile member for added strength and dependability.
- Smooth running for minimal vibration at high speeds.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Super HC® and Super HC® Molded Notch PowerBand® V-Belts

The PowerBand® construction allows multiple belts to function as a single unit, with even load distribution and each strand fitting securely in the sheave groove. Recommended for multiple V-belt drives exposed to pulsating or heavy shock loads which can make belts whip, turn over or jump off the drive.

- The tie band assures high lateral rigidity, guiding the belt in a straight line and preventing it from coming off the drive.
- Concave sidewalls provide proper cord support and full contact with the sheave-groove for equal loading and uniform wear.
- Flex-bonded cords are strongly bonded to the body of the belt resulting in equal load distribution and the absorption of bending stress without cord deterioration.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Hose & Systems

Coolant

Hose Shelf Life

Storage environment, along with rubber materials, can vary the shelf life limit. Shelf life is difficult to quantify as many variables affect the hose. Proper storage precautions can result in three to five years of shelf life. Beyond this time, there can be a significant service life decrease, depending on storage environment variables.

Some variables include:

Hose should be stored in a cool, dry area never exceeding 8100°F (838°C). If stored below freezing, pre-warming may be required prior to handling, testing and placing into service. Store hose in original container. Never stack hose too high, as its weight can crush hose at the bottom of the stack. Gates recommends hose in extended storage be visually inspected and tested prior to use. Hose judged marginal should be replaced to avoid potential failure, property damage or bodily injury. Store hose on a first-in/first-out basis. Unusually long storage, or poor storage environment can deteriorate hose, reduce performance and may lead to premature failure.

Molded Coolant Hose

Gates molded coolant hose is manufactured to fit specific applications. Similar to OEM specifications. Approved for marine applications.

- Recommend for upper, lower, by-pass, heater and other coolant hose applications.
- Heat and ozone resistant cover.
- Engineered to resist electrochemical degradation – the leading cause of hose failure.
- Re-engineered materials resist vacuum collapse, this reduces the need for internal springs in many applications.
- Meets SAE 20R4 and 20R3 Type EC Class D-1 and D-2 specifications.
- Temperature rating: -40° F to 275° F [-40° C to 135° C] in coolant hose applications.

Note: Gates recommends replacing standard worm drive and spring loaded clamps with Gates PowerGrip® SB Clamps each time a new coolant hose is installed.

Caution: Do not use for fuel or oil transfer applications.

Do you need a new Fuel Cap?

Cracked or worn fuel caps allow fuel to evaporate. Even an old fuel cap that appears to function adequately can allow fuel to escape. Equipment with an old, damaged, or missing fuel cap can allow up to 22 gallons of gasoline to evaporate per year. **Are you paying roughly \$4.00 per gallon just to let your money literally disappear into thin air?**

Fuel caps older than 6 years should be replaced to ensure proper performance. Damaged or missing fuel caps should be replaced as soon as possible. With what it saves in fuel, a new Gates fuel cap can pay for itself in no time.

A premium Gates Fuel Cap is a smart economical way to ensure proper performance, emissions reduction, and reduced fuel costs!

Thermostats

SuperStat™* Thermostats

The SuperStat™ thermostat incorporates an all stainless steel construction, larger heat motor and larger spring to provide superior performance. These new features provide:

- Precision temperature control.
- More efficient engine operation.
- Faster engine warm up.
- Fewer emissions.
- Better fuel economy.

Thermostats

Quality controlled factory calibration assures accuracy of opening and closing, regardless of pressure changes.

- Positive piston heat motor provides accurate temperature control.
- Sturdy metal construction throughout.
- Packaging: Individually boxed.

Offset Thermostats

- Offset design thermostat is specified by many Japanese car manufacturers.
- Stem, spring and heat motor is offset from the center of the thermostat flange.
- A "jiggle pin" located in the offset flange of the thermostat allows release of trapped air behind the thermostat.
- Packaging: Individually boxed.

Weir-Stat™* Thermostats

The most effective cooling system control ever developed. Provides faster engine warm-up, stable temperature control, longer thermostat and seal life, improved fuel economy and driver comfort. Vehicles can operate without radiator shutters, reducing front axle weight, cost and noise. Fleets can operate at higher temperatures without the unnecessary activation of shut-down devices or fan clutches.

- Machined bead edge seats positively down on a resilient 3-piece flange resulting in greater no-leak, precision control than the original Weir-Stat™.
- Flange retains its elasticity, resists abrasion and corrosion and remains stable during extreme temperature and pressure changes.
- Packaging: Individually boxed.

* SuperStat™ is a registered trademark of STANT USA Corporation.

MegaCrimp® Couplings

The Versatile “No-Weep” Coupling with the Patented “C” Insert

It's what's inside the pre-assembled MegaCrimp coupling that gives it world-class, leak-proof performance. It is designed with a patented “C” insert, attached to the ferrule, that accommodates hoses of different constructions and wall thicknesses. The insert's design ensures crimping forces are evenly distributed to form a concentric seal. The “C” insert simplifies inventory requirements since one MegaCrimp coupling size can accommodate various hose outside diameters, on both one- and two-wire braid hydraulic hoses.

Key Features

- Robust “bite-the-wire” crimp
- Low profile
- Full-stem insertion
- Full-length crimp
- Tested to industry-leading 600,000 impulse cycles
- Simplifies inventory management
- Environmentally-friendly TuffCoat™ plating for 500% better corrosion resistance

MegaSys® Spiral-Wire Constant Pressure Hoses

EFG3K, EFG4K, EFG5K, EFG6K and G8K Hoses

GlobalSpiral™ Couplings

No-Skive Convenience, Reduced Inventory

GlobalSpiral couplings are specially engineered to provide superior performance for extreme high-pressure, high-impulse spiral-wire hydraulic hose applications. They can be used with all Gates MegaSys four- and six-spiral wire hoses up to 8,000 psi. The innovative, two-piece, no-skive design reduces assembly time, labor, fabrication errors and contamination of the fluid power system. The work area stays clean, and the odors and dust normally created by skiving are eliminated. In addition, the two-piece design reduces parts inventory by 30 percent because only one stem is required for all spiral-wire hose types.

Key Features

- “Bite-the-wire” crimp for improved coupling retention.
- Over 30 thread configurations to maximize application coverage
- Tested to industry-leading 1,000,000 impulse cycles at 6250°F [6121°C]

Perfect Fit; Paramount Performance and Durability; Drop-in Installation

Gates new G-Force® belts are the first of a new generation of Continuously Variable Transmission (CVT) belts. Building upon 100 years of manufacturing and materials success, Gates has brought this technology to both the Original Equipment Manufacturer (OEM) and aftermarket CVT belt markets.

G-Force® drive belts are designed with proprietary measuring technology assuring exact fit. Advanced aramid tensile cords surrounded by specially formulated adhesion gum to reduce edge cord pullout and reinforced fiber loaded undercord are used in construction for dependability, performance and durability for today's recreational and utility all-terrain equipment. Double or single cog design construction matches the OEM belt design, maximizing heat control and flexibility.

Extreme real-world testing has proven the G-Force® belt to be high performing and durable, with no clutching adjustments necessary at installation. Whether trail riding, farming, ranching or extreme riding, G-Force® belts are engineered for demanding off-road conditions.

Just drop in a G-Force® belt and be on your way for work or play.

POWERCLEAN™ Flush Tool

Cooling systems can be difficult to flush completely due to accumulated debris. Inadequate flushing can ruin a newly installed water pump and result in warranty problems and frustrated customers. Make sure you perform a complete cooling system flush by using clean water and compressed air. The Power Clean™ Flush Tool “water hammers” accumulated sludge and scale deposits without the use of harsh chemicals or solvents. It cleans radiators, heat exchangers, hoses and engine blocks more effectively than conventional flushes, maintains system integrity and ensures warranty coverage on replacement parts, including water pumps. The Power Clean™ Flush Tool patented process uses fixed dimensional control of the air and liquid flow paths. The process allows air to pressurize the cleaning fluid to scrub deep into corners and crevices, eliminating trapped debris. Part No. 91002.

- Pulsating gun assembly with pre-set regulator.
- Water line backflow preventer.
- Large rubber tip for radiator necks and direct flushing of the engine block.
- Small rubber tip on whip hose for direct access to heater core tube stubs.

PolarSeal® II Pliers

PolarSeal® II Pliers are used to crimp clamps on PolarSeal® II couplings. Any one of three pliers will get the job done. Each tool is designed with slightly different features.

Ratcheting Plier – Part No. 77953

- The ratcheting plier features a no-release function. Once a crimp is started the plier does not release until the crimp is complete. This guarantees a proper seal, with no guess work in the crimp.

Straight Jaw Plier – Part No. 77952

- The straight jaw plier is a low cost, no-frills plier. This plier works best when there are no obstructions to hinder gripping the clamp or completing the crimp.

Notched Jaw Plier – Part No. 77951

- The notched jaw plier is designed for the hard-to-reach places. If obstructions prohibit the use of straight jaw pliers this is the tool to use. Use either side or the front of this plier to make the crimp.

Professional-Grade Tools

SureLok™ Quick-Release Pliers

SureLok™ couplings (Push-to-Connect) are the easiest and quickest coupling to install, but can be difficult to disconnect. Placement near obstructions, as well as age and road debris, affect the ability to disconnect the SureLok™ coupling. Tight spaces can also make removing a coupling almost impossible. SureLok™ pliers allow for the removal of a Push-to-Connect coupling from the tubing in seconds with just one hand. To help get into tight spaces, SureLok pliers offer two different heads; one straight and one with a 90° offset. They come in two sizes: Small, for tubing from 1/8" to 3/8"; and Large, for tubing 3/8" to 3/4". An instructional CD is included with each part number.

Sold as single units, packs of two (Large or Small), as well as all four in a handy carrying case.

- Measuring coolant concentrations is essential to cooling system maintenance.
- Most technicians use hydrometers to test coolant concentration via gravity or floating ball scales.
- Hydrometers must be temperature corrected, and may give false readings when testing new, propylene-based coolants.
- Gates refractometer automatically corrects for temperature on both types of coolant [ethylene and propylene glycol] while measuring battery charge levels.

Showing Nominal Belt Top Widths and Outside Lengths with Our Corresponding Belt Numbers

Both Truflex® and PoweRated® belts are listed for your convenience. Standard series Truflex® V-Belts are available in four different sizes: the "0000" series, "1000" series, "2000" series and "3000" series V-Belts. The second and third digits in a standard series belt number indicates the outside circumference of the belt, in inches and the fourth digit indicates additional tenths of an inch of belt length, if any.

IMPORTANT: The top width shown is the width obtained by placing a steel tape across the top of the belt. The outside length is determined by placing a steel tape around the outside of the belt. These methods have been used because they are the ones most commonly used by Dealers and Jobbers when measuring a belt.

Showing Micro-V® Belts With Corresponding Top Widths, Nominal Lengths and Number of Ribs

Industrial Micro-V® Belts are identified by a three-part symbol consisting of:

1. Standard Length Designation
2. Cross Section
3. Number of Ribs

For example, the belt designation **780L12** represents:

- (1.) 78.0" in Length
- (2.) L Cross Section
- (3.) 12 Ribs Wide

J Section – including 4, 6, 10, 16 and 20 ribs
 L Section – including 6, 8, 10, 12, 14, 16, 18 and 20 ribs
 M Section – including 6, 8, 10, 12, 14, 16, 18 and 20 ribs

NOTE: Rib combinations noted are RMA standard configurations. Belts available in most multiples.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Nominal Belt Top Widths, Outside Lengths and Angles with Our Corresponding Belt Numbers

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths per Strand and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Hi-Power® II Belts with Corresponding Top Widths and Nominal Outside Lengths

PLEASE NOTE: V-Belt drives which use the belt as a clutch requires special consideration because the heat generated by belt slip (during engagement and disengagement) on some clutching applications can cause the V-Belt tensile materials in the belts listed below to shrink in length. The shrinkage may cause a belt, which is already engaged and driving, to not de-clutch, or a de-clutched belt may engage itself and start driving the machine unexpectedly. Depending on the machine and circumstances, either situation could prove dangerous to the machine operator or bystanders.

Belts especially designed to minimize or eliminate heat shrinkage may be required.

IMPORTANT: The outside length is determined by placing a steel tape around the outside of the belt. This method should be used because it is the one most commonly used by Dealers and Jobbers when measuring a belt.

Key to Size Numbering System

The part number is constructed by placing the number of strands required followed by a slash in front of the size.

In the example above **2/** is the number of strands, **A48** is the belt size.

Showing Tri-Power® Belts with Corresponding Top Widths and Outside Lengths,

PLEASE NOTE: V-Belt drives which use the belt as a clutch requires special consideration because the heat generated by belt slip (during engagement and disengagement) on some clutching applications can cause the V-Belt tensile materials in the belts listed below to shrink in length. The shrinkage may cause a belt, which is already engaged and driving, to not de-clutch, or a de-clutched belt may engage itself and start driving the machine unexpectedly. Depending on the machine and circumstances, either situation could prove dangerous to the machine operator or bystanders.

Belts especially designed to minimize or eliminate heat shrinkage may be required.

IMPORTANT: The outside length is determined by placing a steel tape around the outside of the belt. This method should be used because it is the one most commonly used by Dealers and Jobbers when measuring a belt.
