

PREPARE YOURSELF TO BEAT THE SUMMER HEAT!

DIAGNOSE COOLING SYSTEM PROBLEMS AND INCREASE REVENUE

A healthy **cooling system** is critical to any vehicle's performance. Anything that decreases the system's ability to absorb, transport and dissipate heat can cause the engine to operate at reduced efficiency or even overheat.

The coolant has to get rid of the heat it absorbs while passing through the hot engine block. While a well-functioning radiator plays an important role in making sure the heat absorbed by the coolant is dissipated to the outside air, to ensure optimum performance, it is vital that every single cooling system **component** functions perfectly. The **hoses, thermostat** and **water pump** are essential.

- A kinked hose will reduce the flow of coolant
- A defective thermostat can block the coolant circulation
- A corroded water pump will be ineffective in moving the coolant

To assist workshops diagnose cooling problems more effectively Gates is excited to introduce **Accelerate 30-30-30**, a new training series for technicians.

Topics include:

- Cooling System & Coolant Types
- Coolant Contamination
- Coolant Level Check and Change
- Water Pump Installation & Failure Patterns
- Hose Inspection & Failure Patterns
- Pressure Testing
- Thermostat Failure

The Gates **Accelerate 30-30-30** training program is specific, short and sharp. In just 30 minutes, you and your staff will discover techniques to improve the cooling system diagnostic process. Our goal is to help you increase profits by 30% within 30 days just by using Gates products and our diagnosis process.

BOOK YOUR TRAINING NOW

Simply go online, register your details and a Gates representative will contact you to organise the session:
